

The **open** collaboration platform for governments

www.openray.org

openray

Openray offers a new set of participative tools to engage those in the delivery of public services.

For government sector networks to benefit from our combined knowledge in the sector: we **MUST** share it and publish it so we can re-use it and build on it.

Openray is a powerful virtual capability that facilitates sharing on all levels for maximum impact:

- **News & Blogs** of our leaders, innovators and change agents
- **Communities** of resources in their ePractice portfolio
- **eLibrary** of case studies; guidelines; documents; artefacts that can be easily discovered and re-used
- Coordinate **events** and workshops as we join up to tackle common problems
- A **project portal** and **repository** for joined-up engagement, development and sharing of shared assets across the sector
- A **powerful software forge** so shareable software can be discovered; shared; re-used and built upon.

Knowledge sharing, co-production and co-investment are ideally **all Governments** aspire to.

Without a suitable channel to facilitate this, government

efforts are wasted - collaboration platforms come and go without impact. Existing social media channels add value but are not fit for purpose.

Global trends show, the effort **MUST** be facilitated by an agile organisation not shackled by burdens of bureaucratic red tape - using a powerful virtual enterprise capability to engage resources across the sector. Openray focuses effort to maximise the benefits from knowledge, awareness and visibility of interoperable technologies, standards and methods.

Openray supports federating with existing knowledge repositories where a search links to results in federated forges and repositories.

OPEN TECHNOLOGY FOUNDATION

The **OTF** is an organisation dedicated to leveraging relationships between academia and industry to support the Australian and New Zealand government sector in the research, evaluation, trialling and uptake of open technologies, standards and methods.

opentechnologyfoundation.org

The **Open Technology Foundation (OTF)** works with all tiers of government, from local governments to state governments and federal government departments to implement a collaborative network so combined efforts, knowledge and awareness are shared and built upon - not duplicated and wasted.
